## STAIRCASE SOLUTIONS, INCLUDING PUBLIC ACCESS

CLIENT:

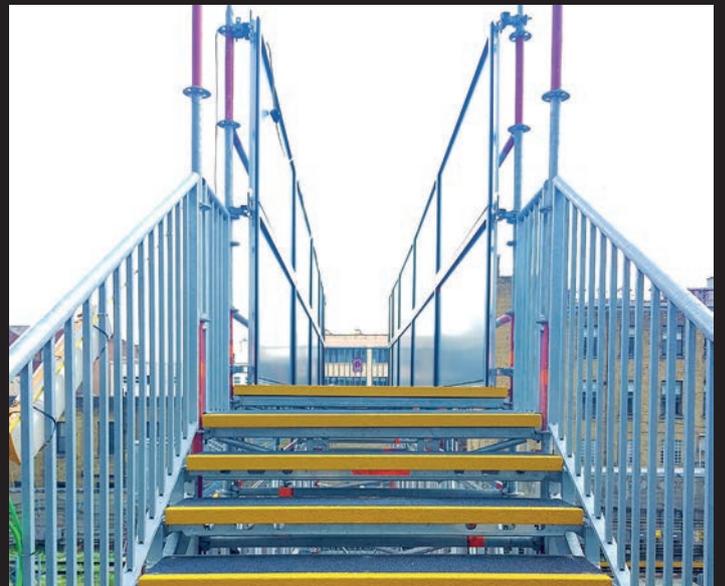

LONDON UNDERGROUND  
AND NETWORK RAIL

---

*"...the products that we have been able to supply have improved considerably allowing us to provide our clients with an increasingly better service from contract to contract."*

We have been designing and installing temporary public access solutions for the past 15 years. During that period the products that we have been able to supply have improved considerably allowing us to provide our clients with an increasingly better service from contract to contract. The scaffolding system that we have invested in is the leading supplier to the Events industry worldwide. These systems are so good that in many cases they often appear to be a permanent fixture rather than a temporary solution. These bespoke stair systems with their child-safety

## QUALITY SCAFFOLDING SINCE 1975

guardrails are intended for both temporary and permanent stairway structures in public areas. Typical applications are as road or rail crossings during building work, as stairways inside buildings for the duration of construction work, as mandatory escape stairways or as a construction stairway.

The staircase can be fitted with Child Proof Guardrails and GRP anti slip treads, which then makes these temporary structures look and feel more like a permanent structure.

The sides can even be fitted with steel panels that also have a dust proof seal. If required the entire structure can be fitted with these panels which gives a complete maintenance free encapsulated solution.

We can supply these staircases with or without the GRP and a choice of having the Child Proof Guardrails. This can then offer differing cost effective solutions for general construction environments.

***“We can supply these staircases with or without the GRP and a choice of having the Child Proof Guardrails.”***

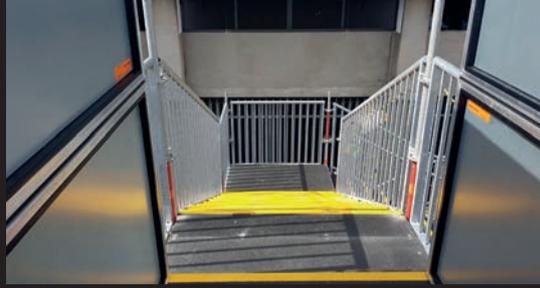

These staircase can be installed in many different combinations, whether it be large and seemingly complicated or small and simple we can supply a staircase to suit your requirements.

This project was carried out by our Special Works Manager, Mr Alan Quorn. Should you wish to discuss any aspect of these works or to discuss an upcoming project of your own then please do not hesitate to contact him either by phone or by email.
