# BESPOKE ESCALATOR ACCESS

CLIENT: NETWORK RAIL

Modular System Scaffolds

Using: Layher Lightweight Aluminium Access

## BESPOKE ESCALATOR ACCESS

CLIENT: NETWORK RAIL

---

With the use of our lightweight aluminium system scaffold, quick and effective access solutions are a certainty. The scaffolds can be built to fit any combination escalator whether it be single, double, triple or even four in a row. Height is not an issue either as we have erected many of these scaffolds with multiple lifts. We can install inside board bracket with differing widths, along with cantilever brackets that can be fitted internally, externally, or even to the sides of the scaffold.

***“The scaffolds can be built to fit any combination escalator whether it be single, double, triple or even four in a row.”***

These scaffolds are designed with minimal imposed loading onto the treads of the escalator, ensuring that the safe working loads of the treads are not overloaded. The scaffolds can be erected in a matter of minutes which is essential when considering that the majority of this type of work is carried out in a very short engineering shift. This gives the users of the scaffold the maximum amount of time possible in order to carry out their work.

### COMPLETION

---

The following photos were taken as the scaffold was erected recently at Fenchurch Street, Station. The scaffold was erected in only 25 minutes from start to completion allowing the engineers to get on with their work in under half an hour.

This project was carried out by our Special Works Manager, Mr Alan Quorn. Should you wish to discuss any aspect of these works or to discuss an upcoming project of your own then please do not hesitate to contact him either by phone or by email.
