

When Will I See Results?

Some clients see some instant tightening and toning of the skin due to the instant contraction of the SMAS layer. Results will continue to improve over time as the collagen fibres grown back thicker and stronger. 2-3 months will show good results and the improvements will carry on into month 6 post treatment.

Each person is different and will see results at different times. Results vary from person to person. Results are completely dependent on your own body's recovery time, age, lifestyle, diet and medical history.

Contraindications (Not Suitable for HIFU)

- Pregnant or breast-feeding.
- Heart conditions or Pacemaker
- Have or ever had Thrombosis or Thrombophlebitis
- Have or ever had cancer
- Diabetes
- Epilepsy
- Auto-Immune conditions
- Metal Prosthesis or Implant in that area
- History of keloid scarring
- Photosensitive medication
- Skin thinning medication within 6 months (Roaccutane)
- Recent Skin Peels (TCA Peels wait 6-8 weeks, AHA or Glycolic Peels) wait 2-3 weeks.
- Anti- Inflammatory medication.

Thermal Effect Targeted At Sculpting The Body

HIFU TECHNOLOGY is a unique technology also for body contouring. The feature that makes it unique is the ability to use a significant power intensity, in a short time. FILLUP TECHNOLOGY uses high intensity focused ultrasound to create a powerful thermal effect capable of reducing, in a targeted way, the fat stored on the abdomen and flanks area. Acting at the depth of 13 mm acts on adipose tissue without damaging the surrounding tissues or non-affected areas.

HIFU Body Treatment

- Reshapes the abdomen, hips, inner and outer thighs, buttocks and inner arms.
- Acting on the localised adipose layer and imperfections caused by cellulite
- Tightening and toning the tissues

Discover the worlds best non - surgical fat removal treatment and skin tightening combo! procedure.

PRICE LIST

Face Treatment

Full Face including neck: £199

Full Face not neck: £150

Eye & Brow lift: £90

Body Treatment

One area: £99

Two areas: £150

Three areas: £199

HIFU NON SURGICAL FACELIFT & BODY CONTOURING

High Intensity Focused Ultrasound also known as Ultrasound Face lift or the 90 day face lift has become one of the most sought after lifting treatments for face neck and décolletage.

The key advantages of this treatment are:

- Stimulates natural collagen production*
- No cuts to the skin*
- No recovery time*
- Noticeable results after one treatment*
- Treatments results can last up to 2 years*

One session of high intensity focused ultrasound will deliver visible effects in lifting and tightening. It will also create new collagen which will help your skin maintain its youthful glow.

Individually it targets brow, jowl and neck lifting, as well as overall skin tightening and rejuvenation. You will see a noticeable improvement in facial contouring, fine lines and wrinkles.

Application for the facial area is once every 3 months for 3 treatments only. Before a further course can be applied there must be a minimum of 6 months. You need to be between the age of 30 and 70.

What Is Unique About This Procedure?

HIFU is the only non-invasive treatment that specifically targets the deep foundation below the skin that is addressed in cosmetic surgery without cutting or disrupting the surface of the skin. It is also the only procedure to use ultrasound imaging, which allows us to actually see the layers of tissue we target during treatment and ensure the energy is deposited precisely to where it will be most effective.

What Does HIFU Therapy Do?

HIFU deposits focused ultrasound energy below the surface of the skin to contract the facial layer as well as stimulate the body's creation of new collagen. As a result, skin will actually begin to lift and tone over time.

What Does Collagen Do? How Does HIFU Stimulate the Creation Of Collagen?

Collagen is a natural protein that gives skin its youthfulness by keeping it firmed, toned and elastic. As we age, collagen loses its elasticity and its ability to stand up to the effects of gravity that pull the skin downward. HIFU jump starts a repair process that produces fresh, new collagen.

Is HIFU Surgery?

No. Unlike a face lift, HIFU is a non-invasive procedure that addresses the skin and support layers below it, but doesn't entail cutting or disrupting the surface of the skin.

Can HIFU Replace A Face Lift?

HIFU is an uplift not a face lift. While it is not a replacement for surgery, it is a viable option for those not ready for a face lift or those looking to prolong the effects of cosmetic surgery

Is it safe?

The procedure has been cleared after demonstrating safety in clinical studies, and tens of thousands of treatments have been performed safely worldwide. In addition, ultrasound energy has a proven track record, with use in the field of medicine for more than 50 years

How Long Does It Take?

A full face treatment takes 60 minutes, and a partial face or brow lift treatment can take around 45 minutes – neither with any downtime.

Is There Any Down Time?

HIFU is an entirely non-invasive procedure and as such, there is no downtime. You are able to return to your normal activities right away, and there are no special measures you need to take.

Who Is Suitable for Hifu?

A suitable candidate is someone who is aged 30+ who has noticed that the skin on their face or neck has become more lax and wishes to lift and tighten the relevant area. For patients in their 30s it is typically used to stimulate collagen production and hence help delay the ageing process. Patients in their 40s and 50s are the most common age group who have this treatment. It is also suitable for those aged 60+ provided the degree of laxity is not too great. It is also for those who have had surgery in the past to prolong the effects of surgical face lifts.

How long until I See Results?

Clients may witness some initial effect, but ultimately lifting and firming will take place over approximately 3 months, as collagen is renewed and replaced with new, stronger collagen. As this collagen building process continues, continued improvements can appear for up to 6 months.

How Long Does It Last?

Most people find results last 1-2 years, although yearly touch-up treatments are recommended to stay ahead of the ageing process.

Does it Hurt?

Most people do not report pain. There can be slight aching over bony areas or a warm sensation in the skin during treatment.
