# SBI Shutters

+

## Domestic & commercial shutters

When you need to combine good looks with strength choose SBI shutters.

# Shutters for all applications

SBI offer a wide range of shutters & grilles to protect your home and business premises from unwanted intruders, burglars and vandals.

## **SG 38mm extruded aluminium shutter, punched or perforated**

Aesthetically, very elegant shutters are housed in small neat cassettes. These shutters provide medium to high levels of security and are suitable for internal or external use. When visibility is required choose the punched option, as this will provide you with approximately 40% vision. The punched sections measure 21mm x 62mm. For additional security you can add clear polycarbonate inserts to glaze the shutter. The perforated option has 5mm diameter holes that provide approximately 18% vision. There are 34 holes per 100mm of slat, you can mix and match punched & perforated.

## **SG 38/44mm extruded aluminium shutter, solid**

Unlike the punched or perforated version that has a single wall lath the solid shutter has a double walled aluminium lath, which is comparable to steel in strength. This type of shutter is ideal to use where you don't want a cumbersome looking shutter spoiling your surroundings, with its smaller size lath and guides it is more pleasing on the eye. The guides are 66mm deep and have a built in brush to help reduce noise when the shutter is operated. The cassette shutter hood is made from top quality aluminium and along with the shutter is available in white or brown as standard.

## **SG 41mm foam filled aluminium shutter**

A very smart looking shutter that is ideally suited to internal use where low level security is required. Normal applications are domestic premises, serveries and bars. As the shutter laths have a foam filling between the aluminium walls, it lends it is great for solar shading. You will benefit from cooler rooms when the shutter is down in the summer months. In the winter months the shutter will help keep the heat in your room when it is down, saving you money on heating bills. Another great use of the shutter is to provide light control. The shutter is also vented for air flow and partial light.

## **SG 56mm extruded aluminium shutter, punched or solid**

A visually appealing appearance works well along side the added strength of a slightly larger lath and guide rail. The shutter still has a smaller cassette box compared to comparable shutters. It provides medium to high levels of security and are suitable for internal or external use. When visibility is required choose the punched option, as this will provide you with approximately 47% vision. The punched sections measure 30mm x 80mm. The guide rails are made from extruded aluminium construction and include brush strips as standard.

# Security and style combined together

SBI shutters enhance any façade whilst acting as a secure deterrent to help prevent loss or damage to your home or business.

## **SG 77mm extruded aluminium shutter, punched or solid**

When you require a large shutter then the SG 77 comes in to its own with widths up to 6m wide and drops up to 4m it can cover most openings. Used mainly for shop fronts and shopping centres as well as serveries and bar shutters. It provides high levels of security and is suitable for internal or external use. When visibility is required choose the punched option, as this will provide you with approximately 35% vision. The punched sections measure 35mm x 80mm. The guide rails are 90mm wide as standard and are made from extruded aluminium.

## **SG 84mm extruded aluminium shutter, punched or solid**

We are proud to present the SG 84 that can cover up to 7m wide in a single shutter! When you need a shutter that combines the maximum width with the maximum visibility look no further as due to the extremely large laths, measuring 84mm high. They enable the punched lath to have excellent visibility, as it will provide you with approximately 47% vision. The punched sections measure 52mm x 100mm. The guide rails are 90mm wide as standard and are made from extruded aluminium. When you need a big shutter with great visibility, available in white or brown.

## **SG 75mm 3" galvanized security shutter, solid and perforated**

When you need no nonsense high security the SG 75 has been designed for high security areas. The shutters work well on any premises including, offices, commercial and industrial units. As standard the shutter will be manufactured in a galvanized finish but for a small surcharge it can be powder coated in any paint colour. Another standard feature of the shutter is the operation which is spring assisted to ease operation. Manual shutters can have either a bottom rail lock or guide rail bullet locks to secure the shutter when closed. With the chamfered cassette box in the continental style it looks good anywhere.

## **Portcullis, tube and link shutter**

This type of shutter is made up completely of the tube and links to enable maximum light and approximately 85% visibility. Typically fitted to the inside of shop windows where minimum security is required. You can combine it with SG75mm solid steel laths to create a stronger shutter with a vision panel and install on to exterior of the shop front if you prefer. The tube and link pattern is normally a brick bond pattern or it can be inline. The shutter can be powder coated in any colour and can be either manually or electrically operated via a key switch.

# Security and style combined together

SBI shutters enhance any façade whilst acting as a secure deterrent to help prevent loss or damage to your home or business.

## SG Titan retractable security grilles

This design of shutter/grille/gate is an extremely versatile security product, providing protection when closed and yet it remains unobtrusive when open. The bunch width takes up approximately 15% of the overall opening width. Retractable security gates are supplied in either galvanized or non galvanized steel. Powder coated in white as standard or any colour of your choice. Our collapsible gates are manufactured from pickets that are 16mm x 10mm x 3mm channels sections, the thickest gate section on the market. Lift up or lift out bottom tracks are available as are a choice of locks.

## Mesh fixed security grilles

Our most popular style of mesh grill is large or small diamond construction for permanent or removable fixture. Various meshes are available in galvanized and non galvanized steel, including 25mm and 50mm square mesh, stone mesh and perforated meshes. Manufactured from mild steel with a framework that edges the mesh to give extra strength and provides a neat finish. Cut outs are available to accommodate handles, letter boxes and the like. We supply the meshes in white as standard but for a small surcharge you can have any colour. Permanent, lift off or hinged, the grille is made to measure to suit any opening.

## Bar grilles

This particular security grille is designed for maximum security and as a permanent fixture, to be installed either inside or outside. Each bar is spaced at 125mm intervals between centre to centre of each bar. Manufactured from 16mm or 19mm steel bars, set in a steel frame and powder coated. 12mm or 16mm square bar, in solid steel, is also available. This can create a brick or Georgian pattern, Alternatively, 12mm x 5mm flat steel can be used to match to existing window frames; ie leaded windows. When you need to secure it don't compromise on quality and choose a solid bar security system.

## Hinged bar gates

Manufactured as above, however, with added hinges and locks. The bar gates can be transformed into an effective security grille for doors. Our standard lock is a CHUBB 3G114. Other locks can be accommodated, as required. Scrolls can be added for a more decorative feature. Cut out are available to accommodate handles and letter boxes etc. The grilles are all made to measure to suit any opening.
